

# EndlessBook - Quick Start

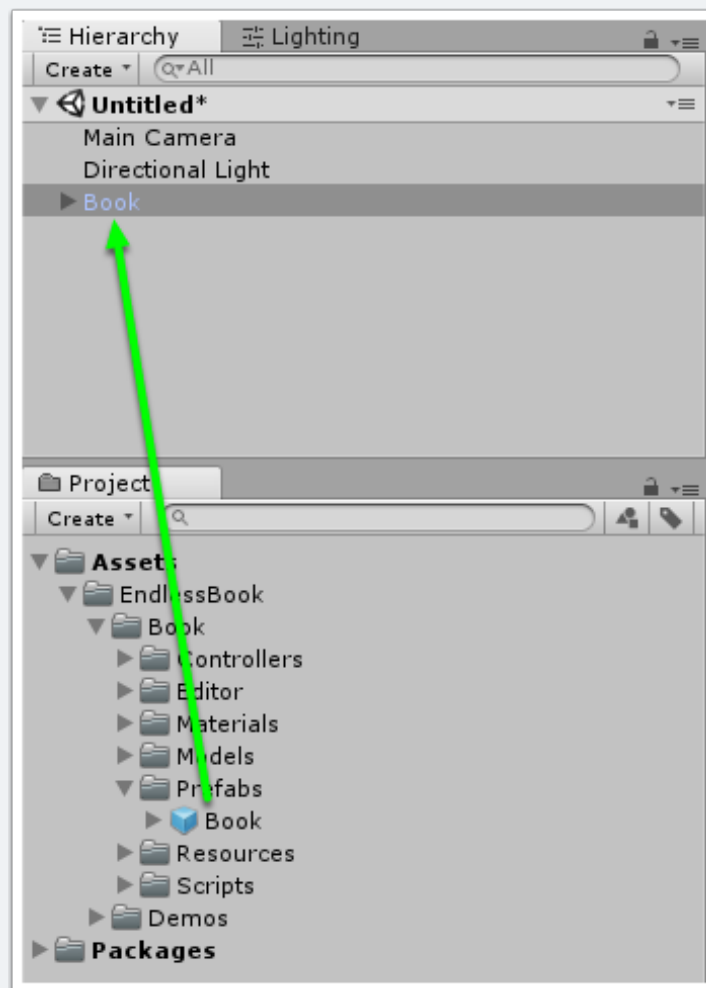

Quickly set up your scene to use an EndlessBook.

# EndlessBook - Quick Start

## Instantiate the Book

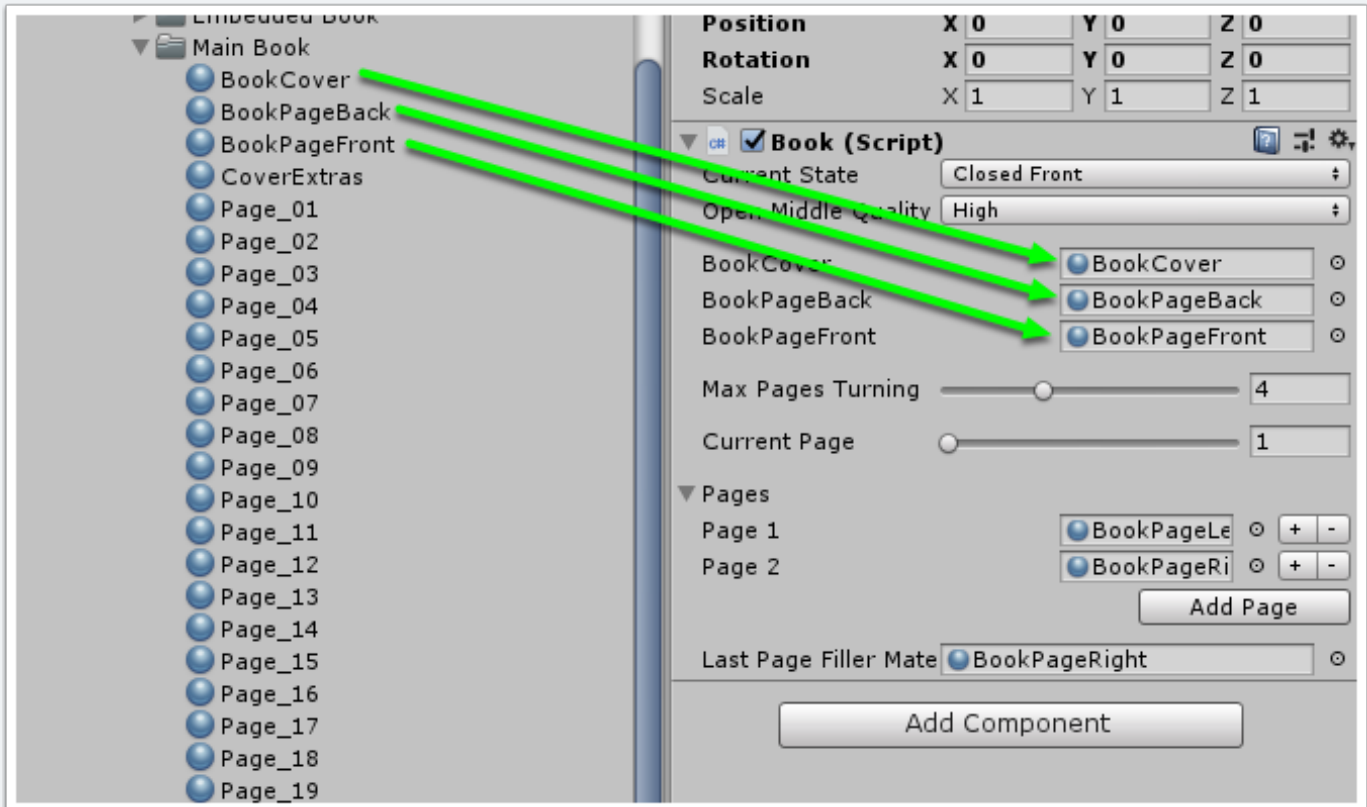

Drag the Book Prefab from EndlessBook\Prefabs folder to your scene.

# EndlessBook - Quick Start

## Set up Materials

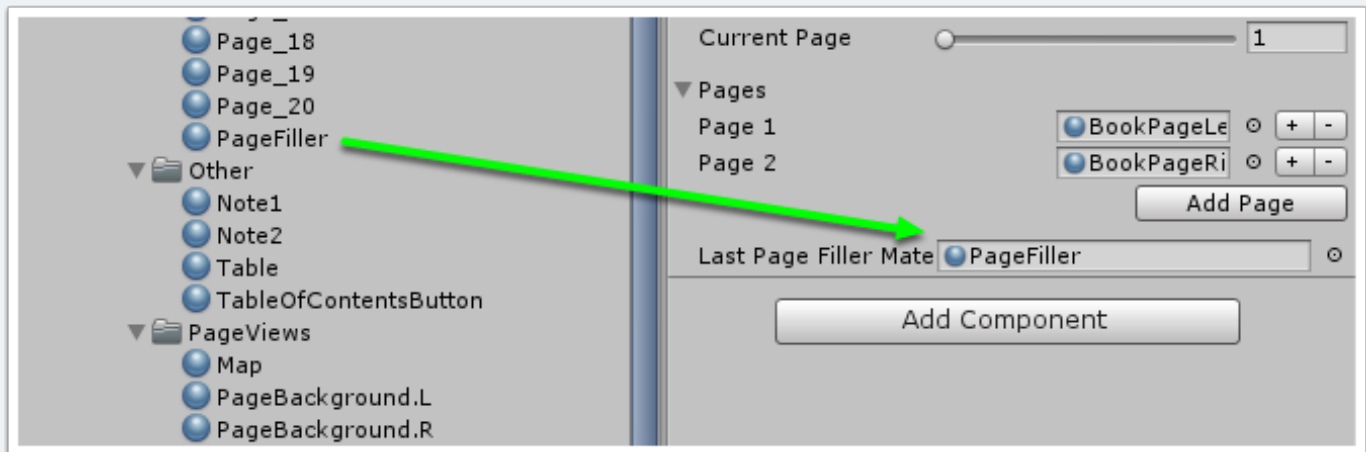

Drag materials for the cover, back page, and front page to the Book Component on the new game object.

# EndlessBook - Quick Start

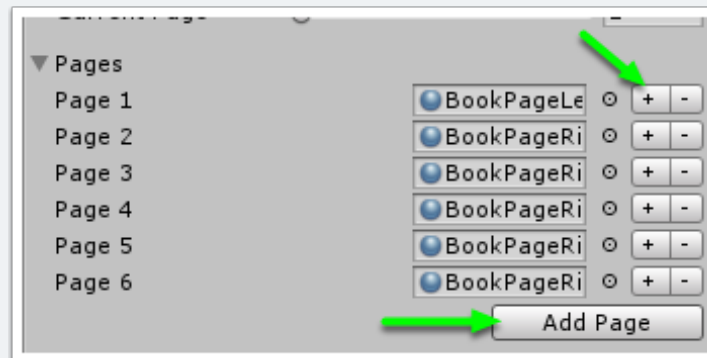

## Set up Page Filler Material

Drag a material to set up your page filler material. This material will also be the default for all new pages created, as well as the final page material if you have an uneven number of pages.

## Create Some Pages

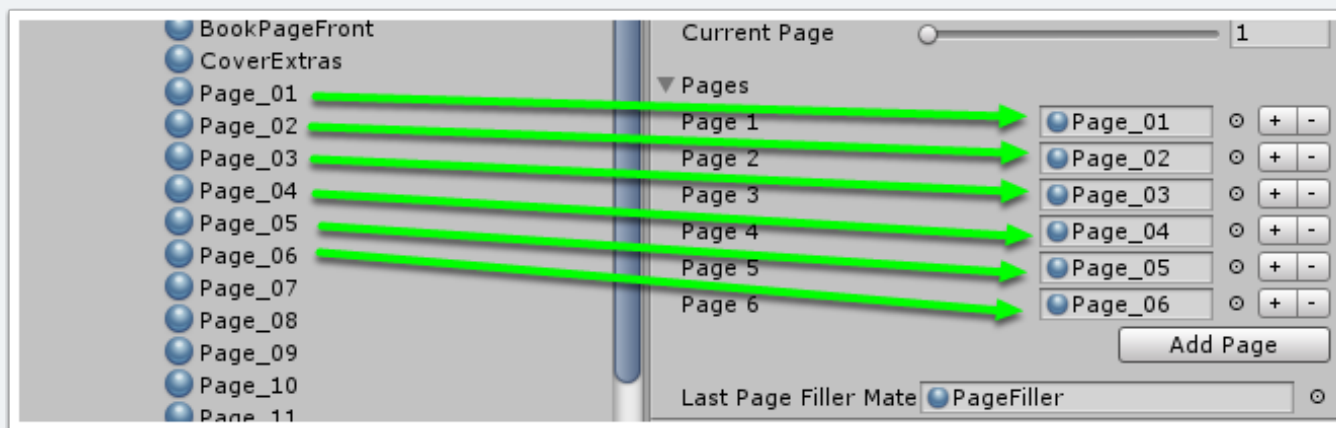

Click the Add Page button or click the small plus buttons to add or insert pages, respectively.

# EndlessBook - Quick Start

## Set Page Materials

Drag materials to your pages.

## Move Your Camera

Move your camera to where it can see the book. The book is inches (not meters) in dimension, so you will likely need to get close. Something like the follow camera transform would be a good place to start:

# EndlessBook - Quick Start

## Preview the Book

Change your Current State to OpenMiddle in the inspector. Change the Current page in inspector. If you want to change states or pages in code (which includes animations), refer to the Demo01.cs script or user manual for examples of how to do this.
